

Lunch meeting CW2422

Timeline →	January	February	March	April	May	June
↓ Activity						
1. Training	<ul style="list-style-type: none"> • Data analysis: CEDA, Chronos • Data extraction: eSquare, Espresso • Six Sigma foundation 					
2. POM data analysis		<ul style="list-style-type: none"> • DOE lot R9653 • Limits & Pareto analysis 				
3. PE matrix & flow			<ul style="list-style-type: none"> • Build one single matrix that maps <ul style="list-style-type: none"> • Identifier • Test type • Binning • Plot type • Functionality 			
4. Automotation			<ul style="list-style-type: none"> • Identify similarities <ul style="list-style-type: none"> • Automate analysis • Use Rstudio + Shiny • Quick first report 		<ul style="list-style-type: none"> • Mini KPI's similar to PE tools <ul style="list-style-type: none"> • Track & link dataset with report, revision control • Roles & responsibilities 	
5. Confluence page						
6. ANN exploration					<ul style="list-style-type: none"> • Build ANN model ? <ul style="list-style-type: none"> • Use analysis matrix & flow • Study requests & analysis patterns 	

Lunch meeting CW24-36

Timeline →	June	July	August	September	October	November
↓ Activity						
2. POM data analysis	Data Analysis & Reporting					
4. Automotation				Plots	Dashboard	Automated drill-down analysis
5. Confluence page

BGSA300AC_Overview_Timeline

Common info

- › [DOE split-plan](#)
- › [Inline-PCM by UMC](#)
- › [PCM report](#)
- › [Binning.info](#)

- › All needed information at one place connected with a proper flow
- › Avoid long emails & loss of information
- › Stay connected to big picture
- › Help to cope with uncertain resources
- › First report is now delivered in days instead of weeks

Back-up slides

3. Analysis matrix

Dimension 1	Dimension 2	Dimension 3	Dimension 4
Identifier	Test parameter	Functionalit y	Plot type
Lot	Test type	Filtering	Scatter
wafer	Limits	Grouping	Cumulative
X-Y position	Binning	Correlation	Wafer map
Site		splitting	Pareto
Tester			

Identifier (Lot/wafer..)_1	Limits & Binning			Scope	Conclusion
a. Filter b. Group c. Correlate d. Plot type	1	8		Yield	Limits exploration
Test type					
400 (Leakage)	a & d		1		
401					
500 (RON)	2		3		Contact issue

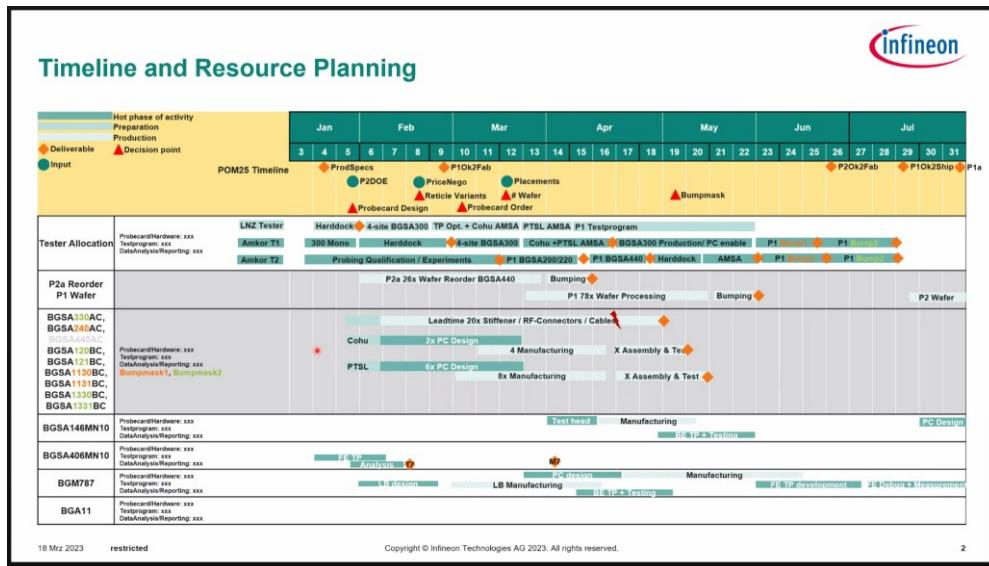

Analysis identifier	Analysis order	Objectiv e	Conclusi on	Next step
R9653_1	213	Cpk = 1.68	Yiel loss not acceptabl e	Explore limits
R9653_2				
.				
R9653_N				

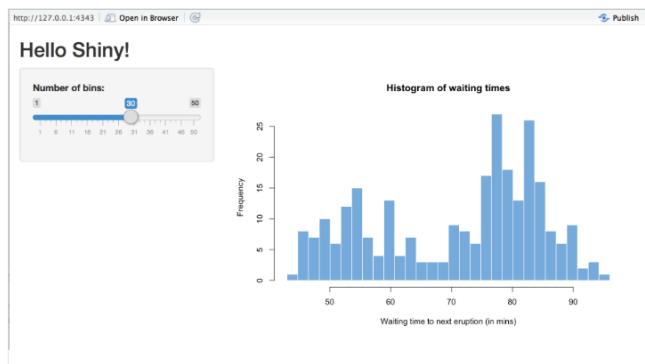

- › Link to further analysis with a flow that can be traced back to PE marix.
- › Track objective, scope, observations and conclusions for a particular dataset.
- › Maximize the re-use of analysis & reports from your peers related to a particular dataset.
- › Once there is more data on analysis flow that can be linked back to PE matrix, then identification of logical similarities is possible.
 - › This helps in defining the most used functionalities, plots, and probably their order of use & needed post processing.....
 - › Use this information to automate using data science tools (Rstudio) and build a web based app (Python).

4. Automation

› Why automation ?

Example Shiny Apps

- › Big line-up of upcoming devices & analysis requests.
 - › Huge pressure in terms of TTM & low FTE
 - › Product requirements might be different but analysis flow is expected to be similar.
 - › Seek to identify and automate 60-70% of the PE activity & flow
 - › Pick best practices/services from existing tools and put together using Rstudio/Python.
 - › Build a web based app to publish, re-use & quick glance of first results with one click.
 - › Further analysis & discussion doesn't need to be start from scratch.
